

Product Description:

A patient turner or patient transfer aid is a piece of equipment that allows a carer to help a patient to go from a sit-to-stand-to-sit in the same place with a turn from one seat to the next. It is used in the moving and handling process to safely assist patients in moving from a bed, chair or wheelchair to stand and then sit on an alternate seat. It makes the movement easier for the carer and more dignified and comfortable for the patient.

Features:

1. A patient turner can be used to aid transfers and movements for patients and aged care residents with limited mobility.
2. Patient turners are mobile pieces of equipment designed for use by carers.
3. They allow them to facilitate standing and seat-to-seat transfers, including those between chairs, beds, wheelchairs, toilets and commodes.
4. As patient turners provide support for a standing position, they allow patients to participate in functional transfers.
5. However, patients must have moderate upper and lower limb strength to safely use the turner.
6. Two large steel discs with two nylon plates making rotating smooth and effortless
7. Weight capacity 150kg
